

**Replication Data Set Codebook
for
Stoll 2010, "Elite-Level Conflict Salience and Dimensionality in Western Europe: Concepts and
Empirical Findings," *Party Politics* 33 (3): 445-473**

This data set contains the data (i.e., the measures of salience and dimensionality) necessary to replicate the results (i.e., tables, graphs, statistics in the text) presented in Stoll (2010) concerning the raw ideological and the raw issue spaces. The original input data used to generate this data set was the updated CMP data file (Budge et al. 2006). The data exists in two forms, given the two levels of analysis employed by the article: in the Excel file, there is a worksheet consisting of data at the country-election level ("Data by Cntry-Elect"), and a second worksheet consisting of the same data aggregated over all parties and countries to the entire West European region by decade ("Data by Decade"). Further, there are two versions of each of these data sets: the original measures ("Original") and the corrected measures ("Corrected"), which correct for some inconsistencies in calculating the dimensionality and include the country—time specific modifications for the United Kingdom that were initially omitted (see the Errata for more information). Finally, following CMP nomenclature, what the article refers to as the "United Kingdom" is labeled "Great Britain" in the data sets.

Note that for the effective space, the analysis was conducted on the CMP data file itself, which means that that is all that is needed to replicate those results.

cntry	Country name [Country-Election data set only]
date	Date of election [Country-Election data set only]
decade	Decade [Decade data set only]
pmat	Salience of the post-materialist conflict (i.e., average % of party manifestos devoted to the conflict in that country—election or decade), country—time invariant version
cult	Salience of the ethnic conflict, country—time invariant version
forp	Salience of the foreign policy conflict, country—time invariant version
dem	Salience of the democratic—authoritarian conflict
socec	Salience of the socioeconomic conflict
rel	Salience of the religious conflict
urban	Salience of the urban—rural conflict
forp.alt	Salience of the foreign policy conflict, country—time variant version
cult.alt	Salience of the ethnic conflict, country—time variant version
pmat.alt	Salience of the post-materialist conflict, country—time variant version
socgroups	Salience of references to social groups
valence	Salience of valence issues
uncoded	Average % of party manifestos not coded by the CMP in that country—election or decade
pmateth	Salience of a combined version of the post-materialist and ethnic conflicts, country—time invariant
p101102	Salience of the sum of the positional CMP coding categories PER101 and PER102
p103	Salience of the CMP coding category PER103
...	
p706	Salience of the CMP coding category PER706
tot.id	Average total % of party manifestos devoted to the seven ideological conflicts (i.e., the sum of dem, socec, rel, urban, forp.alt, cult.alt, pmat.alt); used to re-scale saliences,

	throwing out the irrelevant, non-ideological portion of the manifestos, when calculating the dimensionality
tot.iss	Average total % of party manifestos coded in the CMP coding categories PER101-PER706 (i.e., the sum of p101102 through p706)); used to re-scale saliences, throwing out the irrelevant, non-coded portion of the manifestos, when calculating the dimensionality
n.id	Effective number of ideological dimensions (dem – pmat.alt)
n.id.c	Effective number of ideological dimensions, replacing the ethnic and post-materialist dimensions with the combined ethnic—post-materialist dimension, pmateth, and using the country—time invariant version of the foreign policy conflict
n.iss	Effective number of issue dimensions (p101102-p706)
nmol.id	Effective number (Molinar’s 1991 version) of ideological dimensions (dem – pmat.alt)
nmol.id.c	Effective number (Molinar’s 1991 version) of ideological dimensions, replacing the ethnic and post-materialist dimensions with the combined ethnic—post-materialist dimension, pmateth, and using the country—time invariant version of the foreign policy conflict
nmol.iss	Effective number (Molinar’s 1991 version) of issue dimensions (p101102-p706)
